SPECIALISING IN CUSTOM BRAILLE & TACTILE SIGNS

Braille@barrier manufacture all our braille and tactile signs in-house by employing the latest technologies. Our plant is equipped to cut and print custom shapes and standard plates for your requirements.

Our products are fully compliant with the current Australian Standards AS1428. Our in-house production standards ensure a fast turnaround for your products.

LUKE'S PLACE

The braille & tactile sign for Corrimal Memorial Park was designed by braille@barrier in conjunction with Wollongong City Council and Vision Australia

to encourage an inclusive play environment for all children.

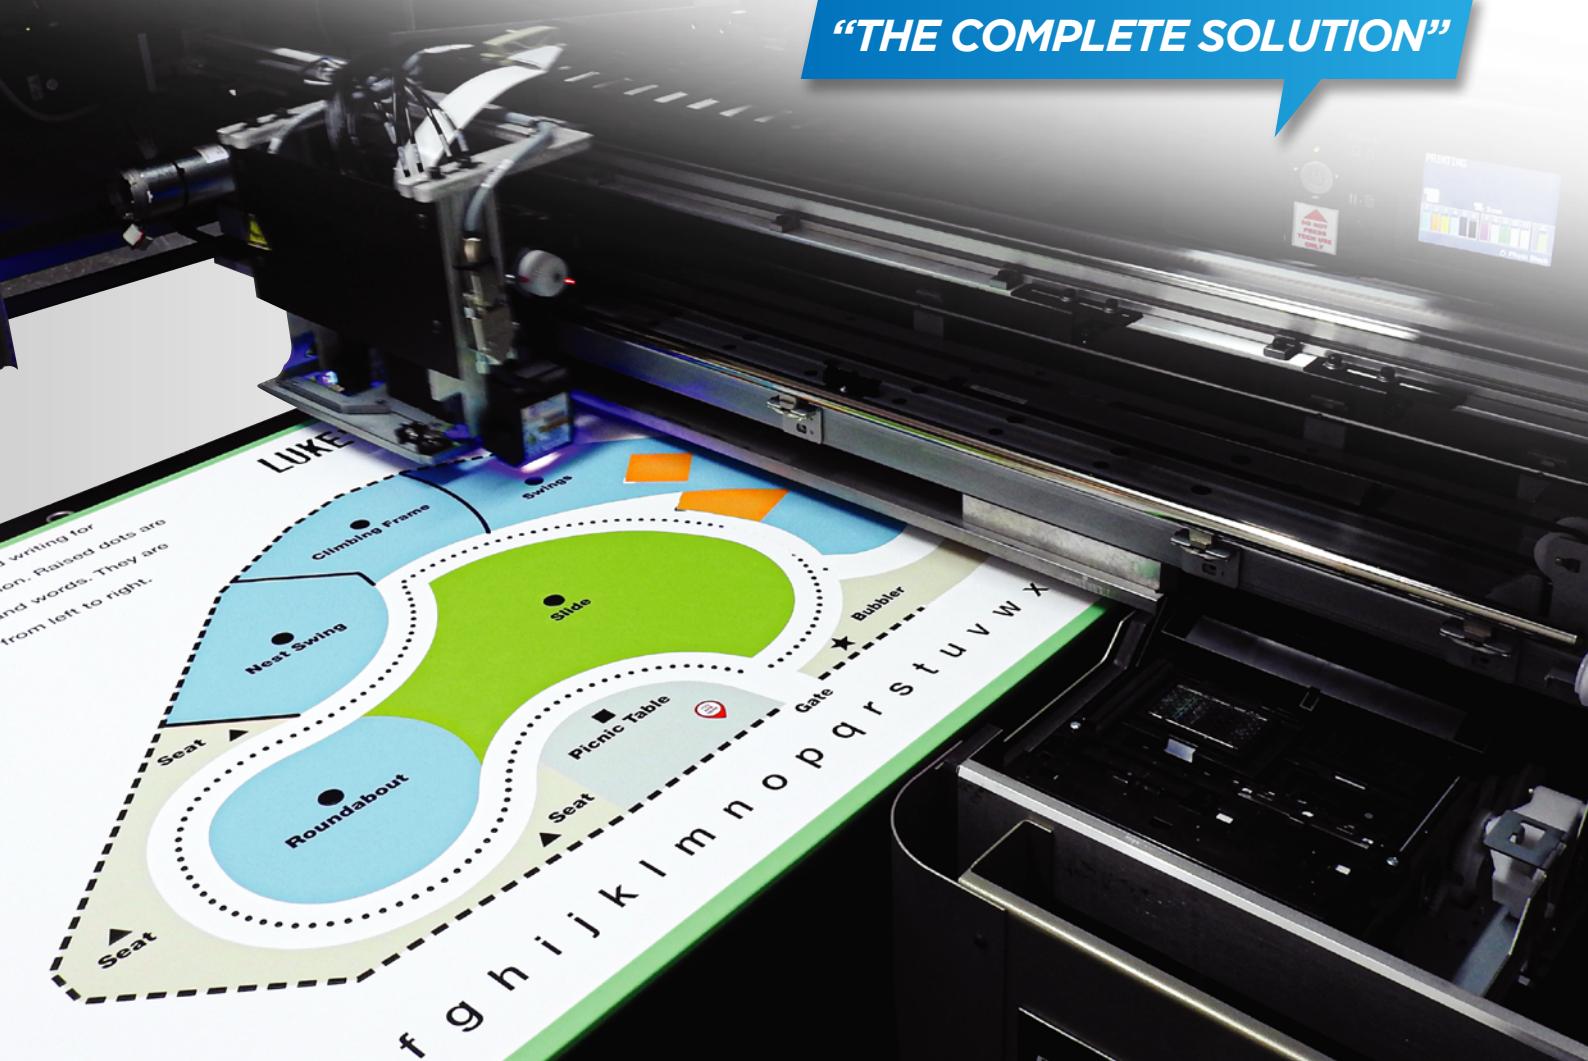

Braille@Barrier

PRINTING • CUTTING • BRAILLE

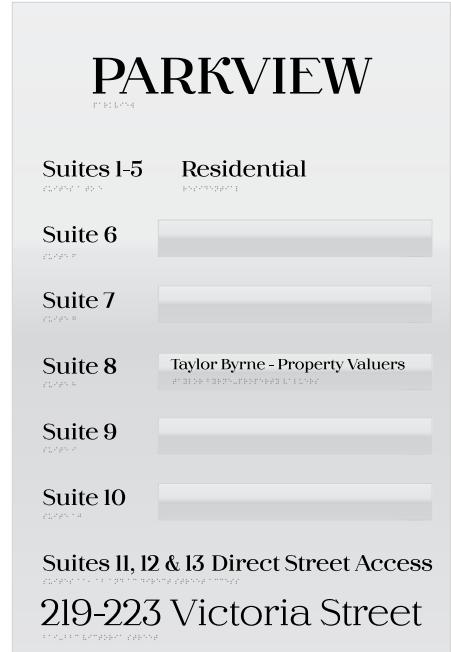

Our braille printing system can process any custom sign to an area of 600mm x 1200mm. This large format enables us to produce endless design options.

“THE COMPLETE SOLUTION”

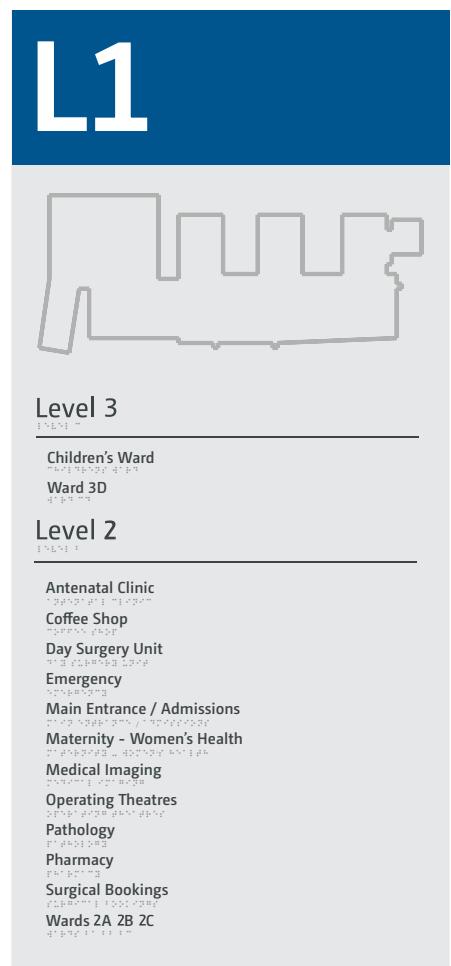

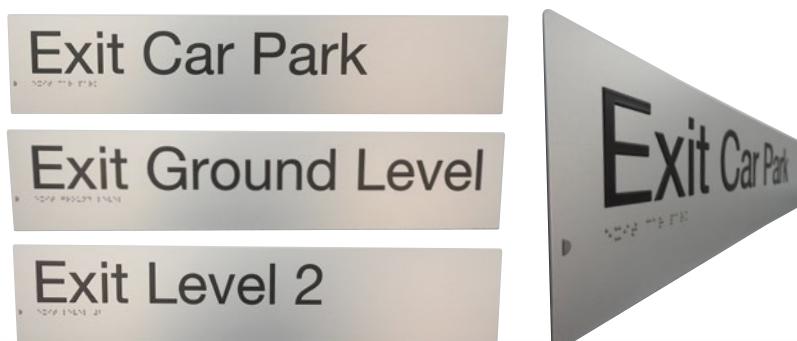

CUSTOM BRAILLE & TACTILE SIGNS

Below is a selection of custom braille and tactile signs ranging from accessibility and exit signs to wayfinding directory boards.

Braille and tactile signs can be matched to any colour specifications to complement your existing sign schedule. We can also design a complete sign suite for building projects such as Commercial Facilities, Schools, Universities, Nursing Homes, Government Premises and Architect Specifications.

WAY FINDING PLINTH SIGNS

Braille and tactile signs can be seamlessly incorporated into any sign system, such as large wayfinding plinth signage like the ones illustrated here.

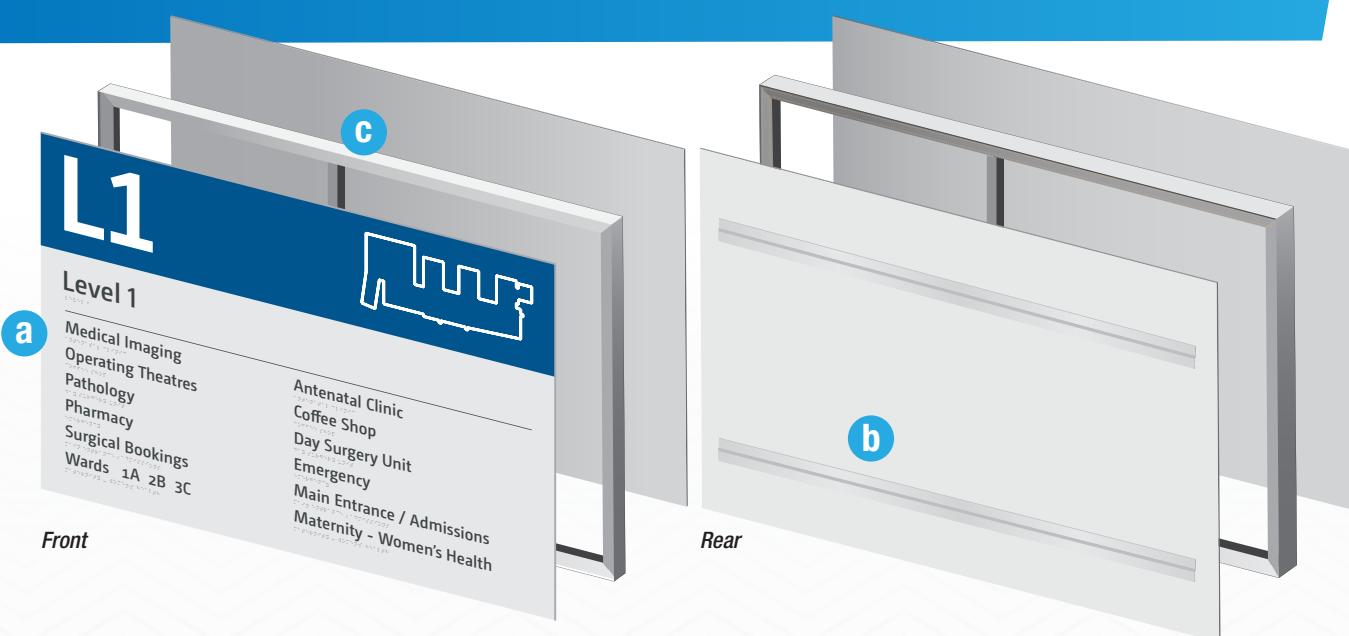

WALL MOUNTED DIRECTIONAL SIGNS

Wayfinding and directional signs using our Barrier frame is a perfect way to incorporate Braille and Tactile elements to your signage schedule.

They can be attached to walls using split battons (b) (aluminium Barrier frame extrusion is attached to the wall which correspond with battons that are attached to the back of the sign).

The face panel (a) can be secured to the frame (c) using a magnetic strip for easy replacement or 3M VHB double sided taped.
As seen in example below.

ALL BRAILLE SIGNAGE MUST COMPLY WITH THE AUSTRALIAN BUILDING CODE.

The diagrams below explain the terminology of braille signs.

WHAT IS “LH” & “RH”

LH stands for LEFT HAND TRANSFER, RH stands for RIGHT HAND TRANSFER. This is in relation to the direction of movement from the wheelchair to the toilet pan.

LH - Unisex Accessible Toilet

AUSTRALIAN BUILDING CODE REQUIREMENTS:

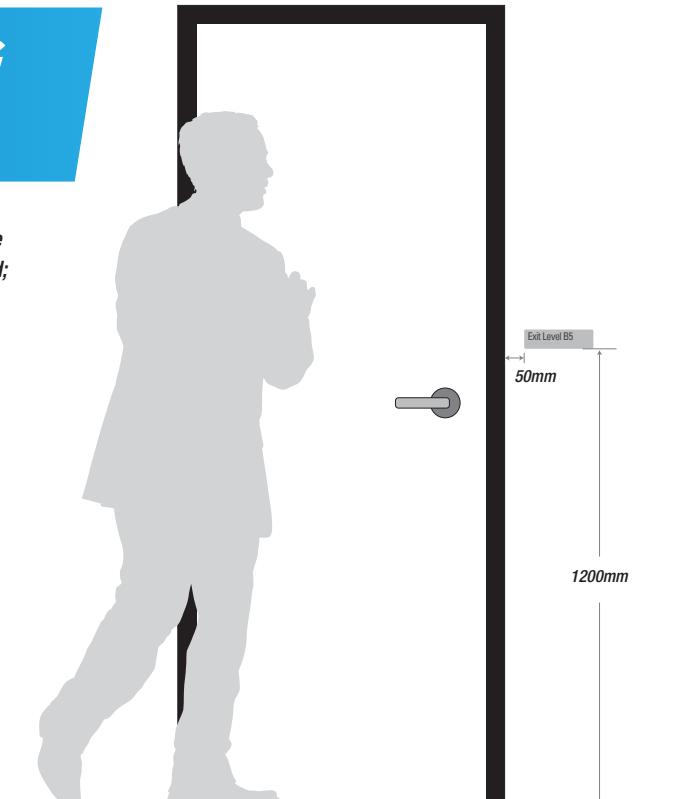

With the current amendments to the Australian building code, every exit in the following scenarios are required to have a braille and tactile exit sign installed;

1. Exit doors opening to a stairway
2. Exit doors opening to the street or open area
3. Exit doors for all horizontal exits in a story

The signs must state: “Exit” and “Level” followed by the floor/level number.

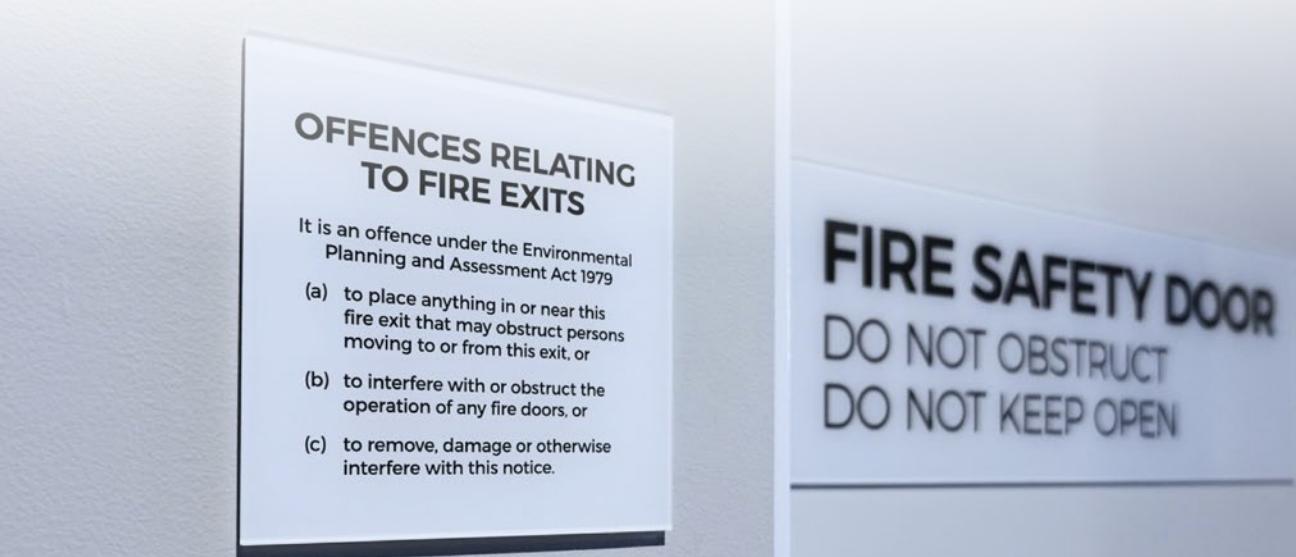

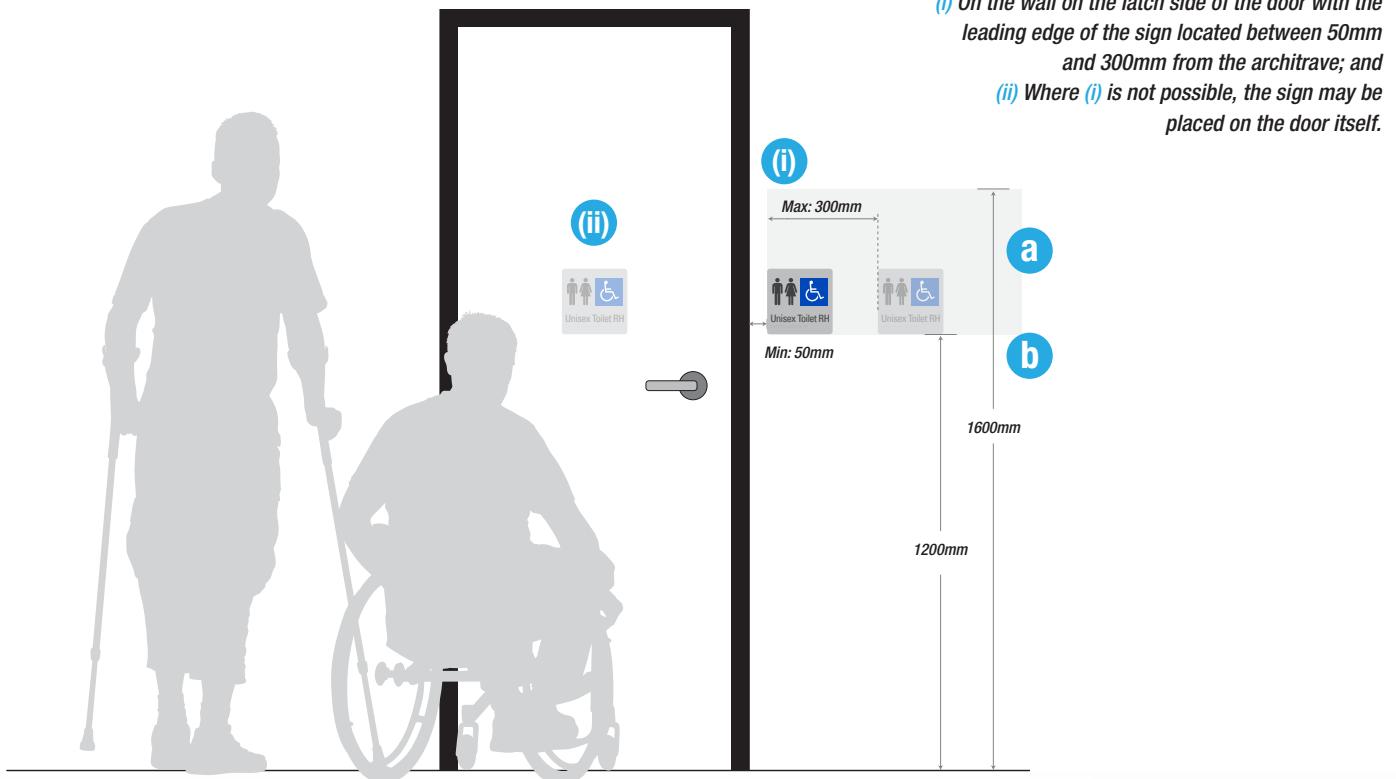

The sign is to be installed on the wall on the latch side 50mm from the architrave.

It must also be located between 1250mm and 1600mm from floor or ground level.

LOCATION OF BRAILLE AND TACTILE SIGNAGE

- (a) Signs must be located not less than 1200mm and not higher than 1600mm above the floor or ground surface.
(b) Signs with single lines of characters must have the line of tactile characters not less than 1250mm and not higher than 1350mm above the floor or ground surface. Signs identifying rooms containing features or facilities listed in D3.6 (Accessible Building Compliancy Code) must be located:

This image shows the correct use and positioning of a Braille / Tactile Exit Sign when used in conjunction with Fire Safety Door and Environmental Planning Act Signage.

CHOOSE FROM OUR RANGE OF STOCK ITEMS

We offer an attractive, compliant "standard" range of accessible signs as well as a "premium" range manufactured from 3mm Aluminium with a 2-Pack polyurethane finish.

Contact us today; we are happy to design and fabricate signs based on your needs. **02 6552 7200**
